Only Casio-fx83 calculators are permitted

UNIVERSITY OF READING

Hydrology and global environmental change (MTMG44)

Two hours

Answer ANY TWO questions

The marks for the individual components of each question are given in [ ] brackets. The total mark for the paper is 100
1. “Everything we know about the hydrological cycle is conditioned by what we can measure”

   (a) Explain how the components of the water balance can be measured at the catchment scale, using ground-based observations

      [30 marks]

   (b) Evaluate the contribution of remote sensing to the estimation of the catchment water balance

      [20 marks]

2. (a) Describe the mechanisms of streamflow development in a typical catchment in southern England, and their relative importance.

      [30 marks]

   (b) Why does a given input of rainfall not always produce the same hydrological response in a given catchment?

      [20 marks]

3. (a) What are the main issues in the development and application of a hydrological model?

      [20 marks]

   (b) Explain how a hydrological model can be used to assess the effects of past and future land use change on hydrological regimes.

      [20 marks]
(c) What are the main uncertainties in the use of a model to assess these effects?

[10 marks]

(End of Question Paper)
